SUMMARY

Senior Full Stack Developer with extensive enterprise experience building distributed cloud applications, self-serve automation tools, and bank wide audit platforms at RBC. Expert in TypeScript, React, Node.js, Python, Java, and automated CI/CD delivery. Official Technology Infrastructure GenAI Advocate and multi award recipient recognized for engineering high-performance solutions and elevating team delivery standards.

EXPERIENCE

Royal Bank of Canada (RBC)

Toronto, Ontario

Senior Full Stack Developer

Sept 2023 – Current

- **Spearheaded the architectural overhaul of a legacy audit application and engineered several new enterprise platforms deployed bank-wide across RBC**, resolving vital regulatory compliance gaps and bridging core systems with City National Bank (CNB) where vendor products fell short.
- **Engineered high-throughput automation pipelines using Python, Node.js, and Java**, slashing critical process execution runtimes from 1 hour down to 5 seconds and drastically reducing infrastructure compute costs across enterprise workflows.
- **Built automated integration pipelines connecting modern cloud platforms to legacy Mainframe and Midrange environments** where no automation previously existed, unlocking new operational capabilities and eliminating manual intervention.
- **Designed custom CI/CD pipelines using OpenShift (OCP), Jenkins, and GitHub Actions** for non-standard workflows lacking off-the-shelf enterprise support, embedding automated SAST/DAST security checks and role-based access control to meet strict compliance standards.
- **Served as primary application custodian, establishing Jira/Kanban workflows and SonarQube quality gates**; honored with both the **RBC Quarterly Performance Award** (2026) and the **MAD (Make a Difference) Award** for resolving complex technical challenges, delivering critical solutions, and consistently supporting colleagues.
- Selected as **official GenAI Advocate** for Technology Infrastructure, championing AI developer tooling, running hands-on enablement workshops, and establishing guardrails for secure code generation to safely scale engineering productivity.

Royal Bank of Canada (RBC)

Toronto, Ontario

Developer

Jan 2023 – Sept 2023

- **Engineered an automated NSIS packaging solution for an Electron/React desktop app**, consolidating over 38,000 files into a single high-speed executable that streamlined deployment across enterprise environments.
- **Migrated legacy Java Spring Boot services to Node.js and Express**, architecting a modern, lightweight API layer adhering to strict OWASP security standards and reducing backend resource footprint.
- **Modernized core Electron.js and React codebases while implementing complete keyboard navigation and WCAG accessibility standards**, eliminating legacy technical debt and improving user inclusivity.

University of Windsor

Windsor, Ontario

Web Developer

Jan 2022 – Mar 2022

- **Architected and executed the end-to-end migration of the research portal from a legacy Squarespace site to Next.js on Netlify**, drastically cutting page load times and hosting overhead through static site generation.
- **Decoupled content management by embedding Netlify CMS**, establishing a Git-backed markdown workflow that allowed non-technical staff to author and publish research findings in real time.
- **Engineered high-performance SEO infrastructure**, including structured metadata, server-rendered open-graph tags, and dynamic sitemaps to optimize search engine indexing.

Creole Studios

India

Full-Stack Developer

May 2021 – Sept 2021

- **Delivered end-to-end full stack solutions across client products**, including launching the **Next.js/Netlify CMS 'GLEAC'** platform and architecting scalable **NestJS/MySQL** RESTful backend services for 'FriMarked'.
- **Accelerated application runtime performance and data processing throughput** by refactoring core algorithms with high-efficiency JavaScript data structures (Maps, Sets) to eliminate computational bottlenecks.

- **Built core RESTful APIs and database schemas for 'Mizaru' using Node.js, Express.js, and PostgreSQL**, collaborating closely with frontend engineers to integrate endpoints into a React and Redux architecture.
- **Integrated the Stripe payment gateway into the platform**, building secure checkout sessions, tokenized transaction handling, and automated webhook event processing.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, SQL, Bash
Generative AI: Prompt Engineering, LLM Guardrails, Content Moderation, Prompt Injection Defense, PII Masking, Structured Outputs, On-Device AI (Gemini Nano)
Frameworks & Testing: Spring Boot, React.JS, Next.JS, Nest.JS, Node.JS, Django, Flask, FastAPI, JUnit, Vitest, Jest
Databases: MySQL, PostgreSQL, NoSQL (MongoDB, DynamoDB)
Build Systems: Gradle, Vite, ESbuild, Rollup, Webpack
Cloud Platforms: AWS (Lambda, S3, EC2, SQS, Cognito, IAM), GCP (Pub/Sub, BigQuery), Azure (App Service, VMs)
DevOps & Security: GitHub Actions, Jenkins, OpenShift, Docker, Kubernetes, Gradle, Maven, SAST, DAST, Snyk, SonarQube
Tools & Methodologies: Jira, Confluence, Agile, Kanban, Git

EDUCATION

Master of Applied Computing	University of Windsor, Windsor, ON	Jan 2022 – Aug 2023
Bachelor of Computer Engineering	Gujarat Technological University, India	Jun 2017 – Jun 2021

COMMUNITY & MENTORSHIP

- **Developer Mentorship & Onboarding:** Actively mentor junior engineers and co-op developers, conducting structured 1-on-1s, technical code reviews, and architecture walkthroughs to accelerate ramp-up times and foster engineering best practices.
- **RBC Women in Technology (WIT):** Volunteer active support for the Women in Technology network, participating in community panel initiatives and advocating for diversity, inclusion, and career development across tech infrastructure.
- **Youth Coding & STEM Outreach:** Organize and facilitate interactive coding workshops for youth, teaching foundational programming concepts and problem-solving to inspire the next generation of technologists.
- **Peer Unblocking & Knowledge Sharing:** Run internal technical sharing sessions and workshops on GenAI tooling, CI/CD automation, and modern full-stack patterns to level up engineering practices across teams.

TECHNICAL PROJECTS

- [Odin-Eye](#)** | On-Device AI Personal Health Hub for Android
- Architected a zero cloud Android health platform using the Health Connect API to aggregate wearable vitals, medication tracking, and sleep telemetry with complete data privacy.
 - Engineered on-device Gemini Nano AI coaching and interactive Home Screen AppWidgets, featuring an offline voice pipeline, AES 256 local storage, and background AudioTrack audio synthesis.
- [RustiCache](#)** | High-Performance In-Memory Datastore & Replication Engine
- Architected a high-throughput Redis-compatible in-memory datastore in Rust, using Tokio async I/O, zero-copy RESP2/RESP3 parsing, and 128 sharded storage partitions.
 - Engineered dual-tier TTL cache eviction and the full Redis replication protocol, featuring PSYNC partial resynchronization, binary RDB ingestion, and continuous command propagation.
- [Hermex Terminal](#)** | Zero-Backend Institutional Market Analytics & HFT Terminal
- Engineered a 100% client-side trading terminal, streaming live Binance WebSockets with sub-100ms L2 order book matching, Canvas liquidity heatmaps, and TradingView charts.
 - Offloaded intensive quant simulations to a background Web Worker, calculating Kyle's Lambda slippage, VPIN toxicity, GARCH volatility, and 10,000 Monte Carlo paths at 60–120 FPS.
